Subject: AttaBox® Brand Transition to Stahlin®

Dear Valued Customer,

Robroy Industries is strengthening and simplifying its Enclosures portfolio by bringing the AttaBox product family into the Stahlin brand platform. This focused alignment brings our non-metallic enclosure offerings together under one unified portfolio—making them easier to specify, source, and support while enhancing our ability to invest in innovation, service, and long-term growth. Most importantly, the AttaBox Heartland product family will continue as the Stahlin AttaBox Series, preserving the product performance and established AH part-number structure customers know today.

What this means for you:

- The AttaBox Heartland Series will continue as the Stahlin® AttaBox® Series. The established AH part-number structure will remain in place. The Stahlin AttaBox Series will also provide the designated direct replacements for Stahlin PolyStar enclosures; PolyStar PC-prefix part numbers will be retired effective October 31, 2026. Please use the accompanying cross-reference guide to identify the applicable AH replacement.
- AttaBox Commander Series and selected AttaBox accessory part numbers will be retired effective October 31, 2026. Designated Stahlin Push Button, CFPC, and accessory solutions are identified in the cross-reference guide.
- Legacy AttaBox fiberglass part numbers will be retired effective October 31, 2026. Stahlin solutions are available for these applications; please work with your Robroy representative or customer service team to confirm the appropriate selection when application requirements are specific or nonstandard.
- For products identified as direct replacements in the cross-reference guide, the designated replacement maintains equivalent form, fit, function, and applicable certifications. For legacy or application-specific configurations, Robroy will provide selection support to confirm the appropriate solution.

To help ensure a smooth transition:

- This transition does not create a transition-related price change. Existing customer pricing and negotiated agreements will be honored in accordance with their terms.
- Quotations will be updated, as applicable, to reflect active Stahlin part numbers and product alignments.
- Customers purchasing products with a designated replacement will be proactively notified and provided updated quotations at their current negotiated pricing, in accordance with applicable agreement terms, ahead of the transition date.
- Supporting product and cross-reference documentation will be available for products identified as direct replacements. Customers with project-specific inspection, listing, or approval requirements should confirm documentation needs with Robroy before conversion.

This transition is designed to simplify your experience while preserving the solutions you rely on. Please review the accompanying cross-reference guide and contact your Robroy sales representative or customer service team for product mapping, quotation updates, or application support.

Sincerely,

Patrick Kane
Product Line Manager
