

AttaBox® to Stahlin® Brand Transition Frequently Asked Questions

Why is Robroy making this change?

Robroy Industries is bringing the strengths of AttaBox into the Stahlin brand platform to create a more unified non-metallic enclosure portfolio. This alignment simplifies how customers specify, source, and support enclosure solutions while strengthening our ability to invest in innovation, service, product availability, and long-term growth.

What is changing?

The AttaBox Heartland Series will continue as the **Stahlin® AttaBox® Series**. It retains the established AH part-number structure and remains an important part of Robroy's unified non-metallic enclosure portfolio.

Separately, designated Stahlin PolyStar PC part numbers will transition to corresponding Stahlin AttaBox AH part numbers. Certain Commander Series products, accessories, and legacy AttaBox fiberglass products are being rationalized as detailed in the cross-reference guide.

When does this take effect?

The transition takes effect November 1, 2026. Beginning on that date, orders for products with a designated replacement should use the active Stahlin part number shown in the cross-reference guide. New Stahlin AttaBox Series AH part numbers will remain unchanged. The guide also identifies products requiring a specific replacement or application review.

What replaces Stahlin PolyStar enclosures?

Designated Stahlin PolyStar enclosures transition to corresponding Stahlin AttaBox Series AH part numbers. For the part numbers identified as direct replacements in the cross-reference guide, the product remains the same; the change is to the brand platform and catalog-number structure. Use the guide to identify the appropriate AH number for a specific PC part number.

What replaces AttaBox Commander Series products and AttaBox Accessories?

For the Commander Series and selected AttaBox accessories, designated solutions are available within Stahlin Push Button, CFPC, and accessory product families. Use the

cross-reference guide for the specific replacement. If an item is not identified as a direct replacement, contact Robroy for application support.

What replaces legacy AttaBox fiberglass products?

Stahlin offers direct replacements legacy AttaBox fiberglass applications. Please contact your Robroy representative for application-specific support.

Will product performance, fit, or function change?

For products identified as direct replacements in the cross-reference guide, the designated replacement maintains equivalent form, fit, function, and applicable certifications. For legacy, modified, or application-specific configurations, Robroy will help confirm the appropriate solution before conversion.

Do I need to redesign, requalify, or recertify my application?

No redesign or requalification is generally expected when using a designated direct replacement.

Will UL listings or inspection documentation be affected?

Documentation supporting the transition, including cross-reference information, will be available for products identified as direct replacements.

Will pricing change?

This transition does not create a transition-related price change. Existing customer pricing and negotiated agreements will be honored in accordance with their terms.

What happens to current quotations and orders?

Robroy will work with customers and provide updated quotations for products affected by the transition. Open orders for products being rationalized prior to the cutover will be fulfilled. After the cutover, customers who place orders for retired products will be contacted regarding the designated replacement or the appropriate next step, with pricing handled in accordance with applicable agreement terms.

How should I use the cross-reference guide?

- Identify the current AttaBox or Stahlin PolyStar part number.
- Locate that part number in the cross-reference guide.
- Confirm its status and the indicated active Stahlin part number.
- Update bills of material, purchasing systems, websites, and product listings to be effective November 1, 2026.

The guide supports direct product transitions and identifies where additional review is needed. For special modifications, unusual environmental requirements, project-specific approvals, or other unique conditions, contact Robroy before changing a design, bill of material, or order.

What should distributors and eCommerce partners do?

Distributors should use the guide to plan inventory and customer communications, distinguishing direct replacements from items that require review. eCommerce partners should update product metadata and customer-facing information using the approved Stahlin names and part-number mappings, and route exceptions to Robroy for support.

Who should I contact for assistance?

Please contact your Robroy sales representative or customer service team for product mapping, quotation updates, documentation questions, or application support.

Important:

Use this FAQ together with the AttaBox-to-Stahlin Cross-Reference Guide. The guide is the controlling reference for part-number transitions. Where a product configuration or application requirement is involved, confirm the designated replacement part number with Robroy before updating a design, bill of material, or order.
